How to create a Story Remix project automatically

There are two ways to create a video project.

You can select the option to let the app create a video automatically with transitions, themes, and soundtracks, or you can create and edit a project from start to finish.

To create a new video remix project automatically, use the following steps:

1. Open Photos.
2. Click the Create button in the top-right corner.
3. Click the Video remix option.
4. Select the image and videos you want to use in the project.
5. Click the Add button in the top-right corner.
6. Type a name for the project.

7. Click the **Create video** button.

Once you've completed the steps, the Photos app will scan the content, and it'll create a video automatically with transitions, styles, and music. Then you'll be able to preview the final project.

If you don't like the current customization, you can click the **Remix it for me** button, and the app will re-arrange the content, change the style, and soundtrack.

At the top of the preview experience, you have a few controls to **undo** and **redo** changes, and at the bottom, you can easily **export** or **share** the video.

Get creative.
